BCP Tools not Installed Error

Short Description:

For PigCHAMP Version 4.5.4 an additional step needs to be taken in order for client computers to export pcf files. When you try to export a pcf file from the client computer prior to following the steps below an error message saying "BCP Tools not installed" will appear, these steps will resolve this error.

Process:

The following steps must be completed on the **client** computer.

1. Find where bcp.exe was installed:
   a. Normally it will be in C:\Program Files\Microsoft SQL Server\90\Tools\Binn
   b. Write down the path to bcp.exe – you will need it in the next step

Now, tell PigCHAMP where to find the bulk copy program (bcp.exe):

2. Navigate to the folder where PigCHAMP is installed (default is C:\Program Files\PigCHAMP)
   a. Make a copy of PigCHAMPCare.xml and rename the copy to PigCHAMPCare_old.xml
   b. Edit PigCHAMPCare.xml to include the following between the <PigCHAMP> and </PigCHAMP> lines:

<SQLServer>

  <ClientToolsFolder> **C:\Program Files\Microsoft SQL Server\100\Tools\Binn**</ClientToolsFolder>

</SQLServer>

The section in bold letters is the path to bcp.exe.
